

Best Analytics Solution: Numerix

Product: Numerix Oneview

Steve O'Hanlon
Numerix

“As data and analytics have undoubtedly become the lifeblood of strategy and decision making, Numerix analytics have continuously evolved to address common challenges across the capital markets. A unique business case of Numerix Oneview in Asia is the focus on supporting private banks, corporates and asset managers with automated price discovery, RFQs and order execution, as well as trade and lifecycle management. Through these initiatives we've ensured clients receive outstanding service while bank relationship managers and traders maximize their efficiency and productivity.”

Steve O'Hanlon, CEO, Numerix

“For Numerix, I highly rate its delivery quality, reliability, scalability and flexibility in coming up with solutions for the issues we face, and—another important factor—the responsiveness of the Numerix management team. When seeking a solution for our new product requirements, we looked at a number of vendors and chose Numerix as we believed it would best meet our needs. It was the right choice. Numerix provided us with the versatility we wanted—the building blocks—to create in-house the products we wanted to put into the market.”

Frederick Shen, head of global treasury business management, OCBC Bank

WHAT'S NEW

- Numerix Oneview's focus on enhancing the offering and distribution of structured investment products has resonated with customers in Asia. Private banks, corporates and asset managers are able to automate price discovery, requests for quotes (RFQs) and order execution, as well as trade management and lifecycle.
- Innovation over the past 12 months has focused on increased automation, greater performance, lower total cost of ownership (TCO) with managed services, and advancements in aggregation and business intelligence (BI).
- Users have benefitted from an automated price discovery and order execution process, resulting in faster trade execution.
- Oneview has a proven ability to support legacy communication protocols, while also supporting industry best-practice connectivity via FIX—a flexible platform that is future-proof. The solution is also able to support post-execution position management, including support for lifecycle events, scenario analysis, and portfolio risk management.

WHAT'S TO COME

- Increased cloud-native functionality, while still fully supporting on-premises deployments.
- New services for interfacing with other systems and integrating with different data sources.
- Enhancements to the application microservice for data management.
- Support for packages/libraries from the Python ecosystem.

WHY THEY WON

As one of the leaders in capital markets analytics, Numerix sets itself apart from the competition through the breadth and depth of its instrument coverage, including highly complex and difficult-to-value derivatives. Its continued investment in technology and automation—including functionality that is highly relevant to the Asian market—puts it in a strong position to meet the ever-growing data and analytics needs of firms in the region.
